

Release Notes – for ODMS 6.4.0

1 Highlights	2
1.1 Automatic Speech Recognition with dictations received via E-Mail or FTP	2
1.2 Additional platform support	2
1.3 Extended Dragon NaturallySpeaking 13 support	2
1.4 Simple response to ODDS users	2
2 Changes and improvements	2
2.1 Font toolbar available in real-time speech recognition editor (VREditor)	2
2.2 Improved software accessibility through changeable font size	3
2.3 DR-1000 & DR-2000 not supported	3
2.4 Reviewed help texts	3
2.5 Templates with header and footer supported with real-time voice recognition	3
2.6 Change from trial to standard licence at any time	3
2.7 SCP – Individual language settings for groups	3
2.8 FIPS 140 supported	3

1 Highlights

1.1 Automatic Speech Recognition with dictations received via E-Mail or FTP

Now it is also possible to automatically add dictation files, which are received via E-Mail or FTP to the speech recognition queue.

1.2 Additional platform support

To provide the support of latest virtualisation technology following platforms are now supported:

- Citrix XenApp 7.6
- XenDesktop 7.6
- VMware Horizon View 6

1.3 Extended Dragon NaturallySpeaking 13 support

1.3.1 Additional versions

Following versions of Dragon NaturallySpeaking (DNS) are officially supported as of version 6.4

- DNS 13 Professional
- DNS 13 Legal

1.3.2 Additional Dragon commands

- Undo that
- Underline <xyz>
- Bullet selection
- Unbullet that
- Bold the previous line

Tested with Dragon NaturallySpeaking 13 (Legal and Professional) and Dragon Medical Practice Edition version 2.

1.4 Simple response to ODDS users

ODMS now provides a more simple way to respond to an ODDS (Olympus Dictation Delivery Service) user, because ODMS considers the sender's original email address (user1@example.com) and not the email address of ODDS (odp_notice@dictation-portal.com).

2 Changes and improvements

2.1 Font toolbar available in real-time speech recognition editor (VREditor)

The VREditor now provides a toolbar to change the basic font styles.

2.2 Improved software accessibility through changeable font size

The font size of the ODMS frontend can now be adapted between 7pt and 20pt. This significantly improves the readability on various screen resolutions.

2.3 DR-1000 & DR-2000 not supported

The USB Microphones DR-1000 and DR-2000 are not anymore supported by ODMS as of version 6.4

2.4 Reviewed help texts

Some texts in the settings were reviewed and accordingly adapted or removed.

2.5 Templates with header and footer supported with real-time voice recognition

Document templates (.rft, .doc and .docx) with a header or footer can be used now with the VR-Editor, resp. with real-time speech recognition. In previous versions of ODMS the header and footer got lost, when used with the VR-Editor. Header and footer have always been supported by background speech recognition.

2.6 Change from trial to standard licence at any time

Now the standard user licence can be entered at any time to change from trial mode to regular mode. In previous versions it was only possible to do that at the end of the trial period.

2.7 SCP – Individual language settings for groups

The System Configuration Program (SCP) is now able to set individual GUI language settings for user groups.

2.8 FIPS 140 supported

Sometimes clients need to enable FIPS (Federal Processing Standard) 140 in their operating system. This is now supported by ODMS 6.4.
